School of Computer Science

The courses will aid the trainee with knowledge, skills, and attitudes which are responsive to the challenging needs in the computing industry. During the course, the trainee shall be exposed to the following core areas: Computer maintenance and user support, Programming, Computer applications, Operating systems and Network and hardware support.

School of Engineering

Courses follow a modular program in which there is a good blending between theory and practice. We recognize the importance of training students in practical skills for them to acquire functional competence in their areas of specialization. With highly qualified and committed lecturers the standards are always on the rise.

School of Aeronautical Engineering

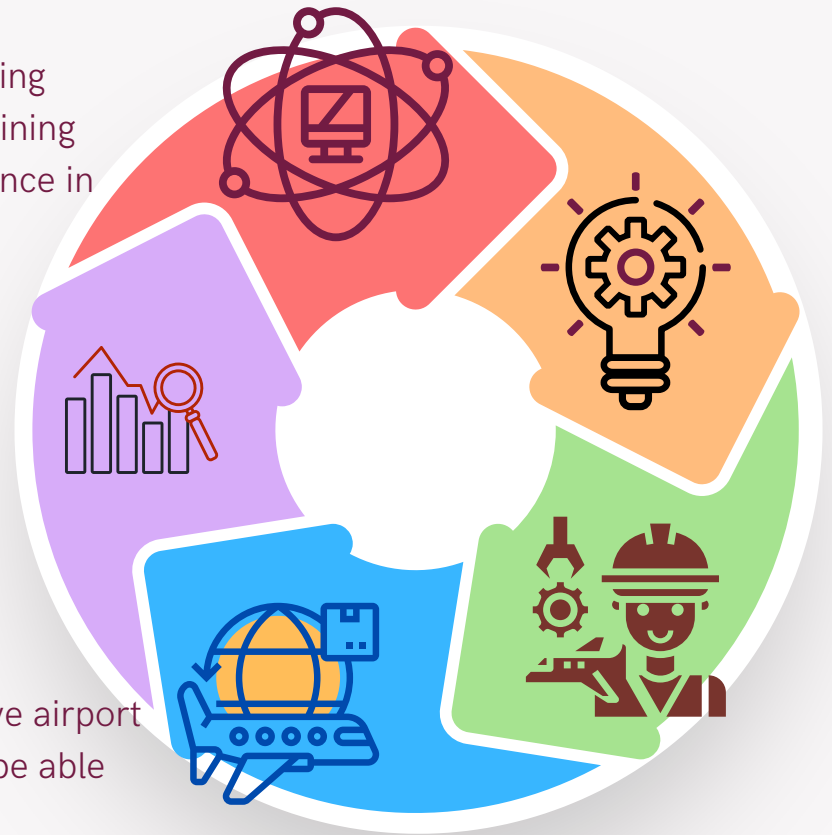

This is technical oriented and majors in aircraft maintenance and design, and also issues the trainee the general knowledge on the aircraft handling and airport safety regulations.

Air Cargo management

This Diploma is designed to address the audience of the prospective airport and ground cargo management. I will also enhance the learner to be able to handle logistics on cargo at any one time.

School of Business

These courses are designed to expose our students to many functions of modern business. They show the student how these functions exist in a changing society and the type of decisions that must be made within that environment. It is designed to expose the student to the multitude of career fields in the areas of business.

**NAIROBI WILSON
TRAINING COLLEGE**

SCHOOL OF LEADERSHIP IN EXCELLENCE

Course information

Registration ongoing for September 2022
